For the second best twelve Tomatoes.....	1 00

At these Summer Exhibitions the Standing Committee on Flowers, Plants, &c., &c., will serve.

The Committee on Fruits, &c., &c., will consist of Messrs. Henry Phelps, James Draper, John C. Newton, George Cruickshanks, of *Whitinsville*, and the Secretary.

In order to afford the Committees an opportunity to examine and report on the articles exhibited, no other person can be admitted to, or remain in the Hall, between the hours of one (1) and three (3) o'clock on the days of the Exhibitions.

AUTUMNAL EXHIBITION.

THE SOCIETY will hold its ANNUAL AUTUMNAL EXHIBITION, A. D. 1877, in its own Halls, on Front Street, in the City of Worcester.

The Exhibition will commence on Wednesday, September 19th at 6 o'clock P. M., and close on Friday, September 21st, at 8½ o'clock P. M.

Exhibitors are notified that strict conformity to the Regulations and Rules will be expected and required, for their own benefit as well as for the convenience of the Officers of the Society.

Particular attention is called to the Rules and Regulations on pp. 11-13, and especially to Nos. 1 and 17, respectively; the one defining the limit of time for entries of Vegetables, and the other requiring lists of all entries to be filed with the Secretary.

RULES AND REGULATIONS.

1. Articles offered for premium at the AUTUMNAL EXHIBITION must be in the Halls and entered with the Secretary before four (4) o'clock P. M., of the opening day of the Exhibition; *provided*, that all entries of Vegetables for the Exhibition must be made with the Secretary *before* 6 o'clock P. M., on the 15th day of September.

2. Competition for premiums is open to all; but a discount of one-third of the amount will be made from awards to persons who are not Members of the Society; and it is strictly required that all specimens offered for premium shall have been grown by the competitors, *within the County of Worcester*.

3. After the articles are arranged they will be under the exclusive charge of the Committees, and *not even the owners* will have liberty to *remove* them, until the Exhibition is closed, when they will be delivered as the contributors may direct.

4. No person shall be entitled to receive more than one premium for the same specimen, and no article for which a premium has been once awarded can receive another during the season.

5. No cards of a business nature will be allowed in any Exhibition.

6. Where a certain number or quantity of Plants, Flowers, Fruits, or Vegetables, is designated in the schedule, there must be neither more nor less than that number or quantity of specimens shown; and in no case can any other varieties than those named in the schedule be substituted.

7. It will be the duty of the Committees to *exclude from exhibition all inferior specimens*. Also, all such *Designs* as, in their opinion, evince an incorrect taste.

8. The Committees have power to change the time of exhibition for any article, if an earlier or later season renders such change necessary, by giving reasonable notice thereof.

9. All articles offered for premiums must be correctly named. Indefinite appellations, such as "Pippin," "Sweeting," "Greening," etc., will not be considered as names. Any person exhibiting the same variety of Fruit or Vegetables under different names; or exhibiting, as grown by himself, Fruit or Vegetables grown by another, thereby violating the objects and rules of the Society; shall be debarred from competing for the Society's premiums until re-instated.

10. No Flowers, Plants, Fruits or Vegetables will be entitled to a premium unless they possess points of superiority; and the Committees are *strictly required* to withhold premiums if, in their opinion, the articles exhibited do not merit them.

11. Competitors will be required to furnish information as to their mode of cultivation, and to present specimens for trial and examination, if requested.

12. No member of any of the Committees for awarding premiums or gratuities shall, in any case, vote or decide respecting an award for which such member may be a competitor, or therein have an interest; but in such case such member shall temporarily vacate his place upon the Committee, the vacancy for the time being to be supplied by the remaining members of the Committee.

13. All premiums that are not claimed within three months after the Autumnal Exhibition shall be forfeited to the Society.

14. The awards of the premiums will be made known as soon as the premium cards can be filled out and placed upon the tables.

15. Admission to the Autumnal Exhibition, for those who are not members of the Society, 15 cents; children under sixteen years of age, 10 cents; packages of five (5) tickets, 50 cents.

16. All Fruits and other articles to be designated at the time of entry, if they are to be reserved; and all fruits and other articles not so re-

served at the time of entry, will be arranged by the Committee on Friday evening at the close of the Exhibition, at 8.30 o'clock, and sold at auction for the benefit of the Society.

17. *Contributors will be required to furnish the Secretary with a list of their articles.*

18. "Downing's Fruits of America," revised edition, will guide the Committees in their decisions upon matters at issue.

 **SPECIAL NOTICE.**—The several Committees will meet at 9 o'clock A. M., Thursday, to make their awards.

Reports of the several Committees on Premiums are to be made in the Hall, on Thursday evening at 8 o'clock, and the premium cards will be placed upon articles receiving premiums immediately thereafter.

A premium of \$10.00 is offered for the best 15 varieties of Pears, and of \$5.00 for the second best 15 varieties, by Messrs James Draper and Wm. H. Earle.

The sum of \$10.00 is placed at the disposal of the Committee to be used in Gratuities for varieties not mentioned in the above list, if in their judgment, the varieties are entitled to it; but in no case shall a gratuity be given to a variety named in the list, which was entered for premium and failed to get an award.

PLANTS, FLOWERS, &c.

COMMITTEE.—Samuel Flagg, *Chairman*; George E. Francis, Clarendon Harris, David S. Messinger, and Henry L. Shumway, of *Worcester*.

The Committee will meet at 7 o'clock on the evening of Wednesday, September 19th, being the opening evening of the Exhibition, to determine the awards.

[RULE: All Pot-Plants shall have been grown in the Pots in which they are exhibited.]

TRANSACTIONS

OF THE

Worcester County Horticultural Society,

FOR THE YEAR 1876;

COMPRISING

THE REPORTS OF THE COMMITTEES AT THE ANNUAL EXHIBITION; THE ANNUAL REPORT OF THE SECRETARY
FOR THE YEAR 1876.

REPORTS.

REPORT ON APPLES.

COMMITTEE.—Wm. T. Harlow, *Chairman*; James F. Allen, Rufus Woodward, Samuel A. Knox, of *Worcester*; and John L. Brown, of *Lunenburg*.

Conspicuous among the abundant crops of the Centennial year is that of Apples. In this County this year existed the material to have made an Annual Exhibition at least the equal of that of any former year. And as regards quality, probably the apples exhibited would have borne favorable comparison with any ever exhibited in Worcester or elsewhere. But the number of exhibitors were few, and the quantity meagre indeed, considering the possibilities offered by the plenitude of the harvest.

As the result of some reflection upon the neglect of apple growers of the County to exhibit their fruit at the show of this Society, your Committee desire to take this opportunity to say that, in their judgment, there is a deeper reason for such neglect than has been commonly supposed. In view of the uncertainty of the apple crop, and the general low price of apples, the New England grower thereof hath been for some years last past rather dubiously turning over in his mind the question: What doth it profit a man to grow apples? No New England crop is subject to such variations as that of apples — variation both of production and of market. In odd years only a nominal crop is to be expected, and to the rule that assigns an abundant yield to some years, there are such exceptions as almost to discredit the rule. And when, after many years of patient waiting (equal at least to a generation of men) for his orchard

to grow, at last, in alternate years, provided neither frost, nor drouth, nor insects, nor other cause patent or latent, interferes to prevent a good yield, fills his cellar and storehouses to overflowing with fruit for which there is but little market; what wonder that the patient waiter should seriously ask himself, *cui bono?*

In the flush times of money and business, five to fifteen years ago, there was not a single abundant crop of apples in the New England States. In any one of the ten years referred to, without doubt, almost any quantity of apples might have been marketed at good prices. The crops of 1872, 1874 and 1876 have all been extraordinary large and good. That of 1872, being one year before the beginning of the general commercial depression that still prevails in the country, was sold at a fair profit to the grower. The crops of 1874 and 1876 have been a drug in the market. Great quantities of excellent apples, that in the fall of 1874 were offered in vain for \$1 per barrel, were in the spring following fed to cattle or made into cider. Commonly regarded as a luxury, rather than a necessity of life, apples are not, from motives of economy, purchased or used by many families, who would not think of retrenching at all in laying in a winter's supply of such an article as potatoes.

Your Committee challenge the economy as false and unsound that treats or views apples as a mere luxury. One dollar per barrel for apples is forty cents a bushel, and ten cents a peck. What equivalent of food to a peck of apples can be bought for ten cents? They are nutritious and wholesome for the young and the old, the sick and the well. They furnish a fresh vegetable acid much needed in the economy of the human system, at a season of the year when it is obtainable from no other source. It is not necessary to make them into pies, sauces or dumplings, nor even that they be baked, roasted, boiled or fried. The art of cooking, as applied to the best apples, that is, such as are large, fair, fully ripe, and neither too sour nor too sweet, is time, labor and fuel wasted.

There is an old saw about apples being gold in the morning, silver at noon and lead at night, intended, doubtless, to convey the notion that it is better to eat apples a good while before going to bed. And a most false and groundless notion it is. There is no better time to eat apples, or any thing else that is fit to eat, than just before retiring to rest — *provided* you are hungry and need to eat. It is Nature's way, and therefore the best way. All animals — and all men, too, not corrupted with the usages, traditions and crotchets of civilization — lie down and go to sleep upon a full stomach. And, unless you have so abused your digestive organ with artificial and unnatural cooking that its operation, even upon simple, natural and healthful food has become a painful process, and will

keep you awake or turn your sleep into a horrid nightmare, apples are to you gold at night as well as in the morning.

It is a popular belief that the apple was the forbidden fruit of the primeval Eden of Hebrew tradition, and the average Bible reader will strongly maintain that the author of the book of Genesis says so. The apple was, undoubtedly, one of the fruits on which primitive man subsisted, and is worthy to have had its origin in—paradise. But that the first estate of apples and men was better than their present, and that men became wise by eating them, and *thereby* fell, we leave to the theologians. Our creed that it is wise to eat apples is not mystical; though time out of mind apples appear to have had some mystical connection with wisdom. Theophrastus says apples were the food of the ancient sages of India. Hence the names *poma sapientium* and *poma paradisiaca* (French *poime de paradise.*) which the botanists have given to the banana. But if there be a fruit in the world that deserves these fine names, it is the apple—the fruit we mean when we say apple.

What shall be done to make growing apples pay? That the coming man will eat apples we have no doubt. And we have just as little doubt that he will have to pay a remunerative price for them. The advent of the coming man wants for nothing so much as the diffusion of correct notions of economy—domestic as well as political *oiconomia*—household knowledge. The coming man will know what it is good for him and his family to eat and he and they will eat it. He will return to the primitive instincts and usages of his prehistoric ancestors, and eat food that it is natural and healthful for him to eat—of which apples were and will be at least a part. Will he drink cider? Well, we don't pretend to know for certain, but rather guess he will—if he can afford to. But when Apples shall come to be fully appreciated as an article of food we have doubts whether it will pay to make them into cider. One of the strong points of the coming man will undoubtedly be a wise economy.

To sum up the purpose of our argument we conclude that Apple growing will pay as soon as the value of Apples as food is fully understood. Meantime, O, reader, it will certainly pay you to buy apples at \$1 per barrel and eat them.

We have awarded the following premiums:

For the second best, Mr. S. Salisbury	4 00

FERNS AND LYCOPODS.—

For the best collection, Mr. S. Salisbury.....	6 00
For the second best, Mr. Wm. T. Merrifield.....	4 00

PARLOR PLANTS IN POTS —(FROM AMATEURS).—

For the best collection, not exceeding twelve varieties, Mrs. T. L. Nelson.....	5 00
For the second best, Mrs. David Scott	3 00
For the best single plant, Mrs. T. L. Nelson.....	2 00
For the second best, Mrs. David Scott.....	1 00

FERNERY OR WARDIAN CASE, from any source.—

For the best, Mrs. T. L. Nelson.....	3 00
For the second best, Mrs. David Scott.....	1 00

GRATUITIES.—

For display of Asters, Petunias, Pinks and Verbenas, Mrs. F. H. Dewey.....	1 00
For Parlor Plants and Seedling Geranium, Mrs. S. D. Ward of Shrewsbury.....	2 00
For Floral Design, Miss Ella Ward, Shrewsbury.....	1 00
For Wild Flowers, Berries and Floral Design, Miss Anne Pratt, Shrewsbury.....	1 00
For display of Flowers and Ice Plant, Mrs. Mowrey, Shrewsbury..	2 00
For Fuchsia in bloom, Mrs C. L. Allen.....	1 00

For Tritoma in bloom, Mr. F. J. Kinney.....	1 00
For stand of superb Zinnias, Mrs. Geo. H. Estabrook.....	2 00
For dish of Wild Berries and Autumn Leaves, Mrs. M. E. Woodward.....	1 00
For basket of Dried Ferns and Leaves, Mrs. S. E. Fisher.....	1 00
For vase of Dried Grasses, Miss Mary Hastings.....	1 00
For Hanging Basket, Mr. S. Salisbury.....	2 00
For Anchor of wild berries, Miss Mary Cummings Shrewsbury.	2 00

Owing to the fine display in every class of plants and flowers, the Committee found great difficulty in deciding how to award the premiums satisfactory to all contributors. Trusting, however, that all concerned will concur in our decision, we submit the above report.

SAMUEL FLAGG, *Chairman.*

REPORT ON PEARS.

COMMITTEE.—Henry L. Parker, *Chairman*; Henry Phelps, John C. Newton, James Draper, of *Worcester*; and Newell Wood, of *Millbury*.

The Committee on Pears respectfully submit the following report :

Although the season has not been particularly propitious, no finer fruit, as a whole, has been shown at our annual exhibitions. The Committee were inclined to attribute this to the single entry system, believing that the effect of that system is to induce more care on the part of contributors in the selection of specimens.

The venerable President of the Massachusetts Horticultural Society, in his address before the Pomological Convention at Boston, a few years since, advanced the theory that the time was soon coming when cultivators would be compelled to give to our native varieties of Pears the first rank, as being better adapted to our peculiarities of climate and soil. It is noticeable in confirmation of this theory, that at each succeeding exhibition our native Pears are coming to the front. It will be seen that upon the Society's list for cultivation the native pears are largely in the

ascendant, and the presumption is that when the revision of that list (so sadly needed) shall be made, they will be even more largely represented. Fruit growers are recognizing this truth in regard to other varieties of fruit. Mr. J. B. Moore of Concord, who from his experience can surely speak with authority, in some late remarks upon this subject, before the State Board of Agriculture, says, in substance, that all seedling fruits require for their best development the same characteristics of soil as that in which they originate—that Western seedling Strawberries will not thrive at the East—that an apple originating in a cold, wet soil, cannot be made to do well in a dry. And, upon the subject of Pears he says that, while thirty years ago, with the exception of the Seckel, we were almost entirely dependent upon foreign varieties, now in selecting a list of fifteen, he can make at least ten of them American varieties. It is gratifying, in this connection, to be able to state that this Society has, through one of its late members, the lamented John Milton Earle, made one really valuable contribution to the list of our native Pears. This Pear (Earle's Bergamot) was shown at the Annual Exhibition by V. P. Townsend. It is highly flavored, aromatic, and in quality *première*. We have faith that it will prove to its originator "*monumentum aere perennius*."

The Committee have made the following award of premiums :

CLASS I.—

For the best twelve Bartlett, M. O. Whittier,.....	\$ 3 00
For the second best, Newell Wood.....	2 00
For the third best, Alfred Davis.....	1 00
For the best twelve Beurre Bosc, E. W. Lincoln.....	3 00
For the second best, Joseph Boyden.....	2 00
For the third best, William H. Earle.....	1 00
For the twelve best Beurre Clairgeau, Wm. H. Earle.....	1 00
For the best twelve Beurre d'Anjou, O. B. Hadwen.....	3 00
For the second best, S. S. Foster.....	2 00
For the third best, Daniel Kinsley.....	1 00
For the best twelve Beurre Delaunoy, O. B. Hadwen....	2 00
For the second best, no award.....	1 00
For the best twelve Buerre Diel, H. L. Parker.....	2 00
For the second best, J. F. Allen.....	1 00
For the best twelve Beurre Hardy, O. B. Hadwen.....	1 00
For the best twelve Beurre Langelier, V. P. Townsend.....	2 00
For the second best, F. G. Stiles,.....	1 00

For the best twelve Beurre Superfin, Moses Church.....	3 00
For the second best, S. J. Brimhall.....	2 00
For the third best, James Draper.....	1 00
For the best twelve Dix, S. S. Foster.....	1 00
For the best twelve Doyenné Boussoc, O. B. Hadwen.....	2 00
For the second best, Newell Wood, Millbury.....	1 00
For the best twelve Doyenné du Comice, S. S. Foster.....	3 00
For the second best, E. W. Lincoln.....	2 00
For the third best, P. L. Moen.....	1 00
For the best twelve Duchesse d'Angoulême, S. P. Hicks.....	3 00
For the second best, D. S. Goddard.....	2 00
For the third best, O. B. Hadwen.....	1 00
For the best twelve Durandean, James Draper.....	2 00
For the second best, Stephen Salisbury.....	1 00
For the best twelve Flemish Beauty, Mrs. Marshall Flagg.....	2 00.
For the second best, Joseph Boyden.....	1 00
For the best twelve Goodale, Joseph C. Lovell, W. Boylston.....	2 00
For the second best, no award.....	1 00
For the best twelve Glou Morceau, Newell Wood.....	3 00
For the second best, S. S. Foster.....	1 00
For the best twelve Howell, Mrs. G. A. Chamberlain.....	2 00
For the second best, Moses Church.....	1 00
For the best twelve Josephine de Malines, E. W. Lincoln.....	3 00
For the second best, no award.....	1 00
For the best twelve Lawrence, Charles T. Foster.....	3 00
For the second best, Wm. H. Earle.....	2 00
For the third best, Alfred Davis.....	1 00
For the best twelve Louise Bonne de Jersey, Daniel Kinsley.....	3 00
For the second best, Moses Church.....	2 00
For the third best, Mrs. G. A. Chamberlain.....	1 00
For the best twelve Marie Louise, S. S. Foster.....	2 00
For the second best, Chas. S. Foster.....	1 00
For the best twelve Mt. Vernon, O. B. Hadwen.....	1 00
For the best twelve Onondaga, Joseph Dusenbury.....	2 00
For the second best, Wm. H. Earle.....	1 00
For the best twelve Paradis d'Automne, V. P. Townsend.....	2 00
For the second best, F. M. Marble.....	1 00
For the best twelve Seckel, Stephen Salisbury.....	3 00
For the second best, F. M. Marble.....	2 00
For the third best, Alfred Davis.....	1 00
For the best twelve Sheldon, O. B. Hadwen.....	3 00

For the second best, Wm. G. Maynard.....	2 00
For the third best, R. R. Crane.....	1 00
For the best twelve St. Ghislain, Mrs. Geo. A. Chamberlain.....	2 00
For the second best, Newell Wood	1 00
For the best twelve St. Michel, H. Chapin.....	2 00
For the second best, Joseph C. Lovell	1 00
For the best twelve St. Michel Archange, Geo. M. Pierce.....	2 00

For the best twelve Urbaniste, O. B. Hadwen.....	2 00
For the second best, Joseph C. Lovell.....	1 00
For the best twelve Vicar of Winkfield, V. P. Townsend.....	2 00
For the second best, Wm. H. Earle	1 00
For the best twelve Washington, E. W. Lincoln.....	2 00
For the second best, no entry	1 00
For the best twelve Winter Nelis, E. W. Lincoln.....	3 00
For the second best, James Draper,.....	2 00
For the third best, Alfred Davis.....	1 00
For the twelve best specimens of Beurre Bosc (Special), Wm. H. Earle.....	5 00

GRATUITIES.—

Joseph Pratt, Dunmore.....	1 00
V. P. Townsend, Earle's Bergamot.....	1 00

HENRY L. PARKER, *Chairman.*

REPORT ON VEGETABLES.

COMMITTEE.—Alexander Marsh, *Chairman* ; Thomas R. Norcross, J. D. Lovell, Charles Belcher, and William H. Hackett, of *Worcester*.

The Committee on Vegetables have attended to their duties and report as follows :

There has never been a year when there was so close competition in the different lots as the present. It was almost impossible to tell exactly what we ought to do. Although almost unanimous in our opinions on the various lots, yet some might think we did not use our best judgment ; but we will assure you we had no favorites. There were several premiums offered for articles which were not on exhibition. There was not quite so large a show as some previous years, owing in some measure to the extremely hot weather. We must mention those most delightful Water Melons, the largest and sweetest we ever gave a premium to, and we would recommend to those wishing to improve their Melons to get some of the premium seeds.

We do not think the small farmers or gardeners quite understand the present arrangements in the HALL OF CERES. There are no large collections as formerly, but it is so arranged that a person who owns a few rods of land can compete for the premiums as well as the largest farmers, and is as sure of his premiums, if he has the best Beets, Cabbages, Squashes, Onions, Beans, Potatoes, Corn, Tomatoes, or Melons, &c.

Your Committee would most earnestly recommend that in future the premiums be offered and given to the best and most perfect specimens, without regard to size ; what we mean is, such as people would be most likely to buy at the market for their own use. The object is to improve the quality, instead of the large, overgrown products, which have to be fed out to the cattle to get rid of them. If an arrangement could be made whereby the articles could be on the tables by four o'clock, the Committee would have time to arrange them before the evening services begin, and very much lighten their evening's work.

BEANS.—

For the best four varieties, State Lunatic Hospital.....\$ 1 00

BEETS.—

For the best six Long Blood, P. L. Moen.... 1 00
 For the best six Early Bassano, Samuel Putnam..... 1 00
 For the best six Egyptian, Frank J. Kinney..... 1 00
 For the best six Sugar, Samuel Putnam.... 1 00
 For the best six Turnip, Sylvanus Sears..... 1 00

CABBAGES.—

For the best two Large Flat Brunswick, State Lunatic Hospital 2 00
 For the best single specimen, Simon E. Fisher..... 1 00
 For the best two Drumhead, Simon E. Fisher..... 2 00
 For the best single specimen Drumhead, weight not less
 than 30 lbs , no entry..... 2 00
 For the best two Drumhead Savoy, Simon E. Fisher..... 2 00
 For the best single specimen, no entry..... 1 00
 For the best two Early Sweinfurth, Simon E. Fisher..... 2 00
 For the best single specimen, Simon E. Fisher..... 1 00
 For the best two Red, State Lunatic Hospital..... 2 00
 For the best single specimen, State Lunatic Hospital.... 1 00
 For the best two Savoy, Joseph Pratt..... 2 00
 For the best single specimen, Simon E. Fisher..... 1 00

CARROTS.—

For the best six Early Horn or Short Scarlet, Samuel Putnam 1 00
 For the best six Long Orange, Stephen Salisbury..... 1 00
 For the best six Red, no entry..... 1 00
 For the best six White, Samuel Putnam..... 1 00

CAULIFLOWERS.—

For the best three specimens, Sylvanus Sears..... 2 00
 For the best single specimen, S. H. Allen, Shrewsbury... 1 00

CELERY.—

For the best six roots, Daniel Tainter..... 3 00
 For the second best, P. W. McDonald..... 2 00

CORN.—

For the best collection of Sweet, not less than five named varieties, Alden H. Sears..... 4 00
 For the second best, Frank J. Kinney..... 3 00

For the best six ears of Sweet, Samuel Putnam.....	2 00
For the second best, Sylvanus Sears.....	1 00
For the best Yellow or Field, of twenty ears traced, Mrs. Geo. A. Chamberlain.....	2 00
For the second best, F. J. Kinney.....	1 00
CRANBERRIES —	
For the best peck, no entry.....	1 00
CUCUMBERS.—	
For the best half peck for pickling, Sylvanus Sears.....	2 00
EGG PLANT.—	
For the best three specimens, State Lunatic Hospital... ..	1 00
HORSE RADISH.—	
For the best six roots, Mrs. M. E. Woodward.....	1 00
MELONS.—	
For the best two Water, Henry E. Rich.....	2 00
For the second best, Eben Jewett....	1 00
For the best Green Flesh, three specimens, no entry.....	2 00
For the best Yellow Flesh, three specimens, no entry.....	2 00
ONIONS.—	
For the best four varieties, a half peck of each, no entry. . .	3 00
For the second best, no entry.....	2 00
For the best half peck of Red, State Lunatic Hospital....	1 00
For the best half peck of Silver Skin, P. W. McDonald.....	1 00
For the best half peck of White Portugal, no entry.....	1 00
For the best half peck of Yellow Danvers, State Lunatic Hos- pital.	1 00
PARSNEPS.—	
For the best six Guernsey, Stephen Salisbury.....	1 00
For the best six Hollow Crown, Ashley Moore.....	1 00
For the best six Student, Sylvanus Sears.....	1 00
For the best six Short, no entry.....	1 00
POTATOES.—	
For the best five named varieties, half a peck of each, F. J. Kinney....	6 00
For the second best, Sylvanus Sears.....	4 00
For the third best, Cyrus White, Millbury.....	3 00

PUMPKINS.—

For the best three, weight not less than 20 lbs. each, Stephen Salisbury.....	2 00
For the second best, Simon E. Fisher.....	1 00

PEPPERS.—

For the best half peck, State Lunatic Hospital.....	1 00
---	------

SALSIFY.—

For the best six specimens, P. L. Moen.....	1 00
---	------

SQUASHES.—

For the best three pure Crookneck, no entry.....	2 00
For the best three pure Canada Crookneck, Simon E. Fisher..	2 00
For the best three pure Hubbard, Isaac Mills.....	2 00
For the best three pure Mammoth, P. L. Moen.....	2 00
For the best three pure Marblehead, Simon E. Fisher..	2 00
For the best three pure Marrow, Sylvanus Sears	2 00
For the best three pure Turban, Alden H. Sears	2 00

TOMATOES.—

For the best Boston Market, State Lunatic Hospital.	1 00
For the best twelve Lester, State Lunatic Hospital.....	1 00
For the best twelve Tilden, F. J. Kinney.....	1 00
For the best twelve Trophy, Alden H. Sears.....	1 00
For the best twelve of any other named variety, "Wilcott," P. L. Moen.....	1 00

TURNIPS.—

For the best six English or Flat, white or yellow, Simon E. Fisher.....	1 00
For the best six White Swedes, no entry.....	1 00
For the best twelve Yellow Swedes, Sylvanus Sears.....	1 00

GRATUITIES.—

For Flat Dutch Cabbage, State Lunatic Hospital.....	1 00
For the best three pure Yokohama Squashes (offered by the Secretary), Simon E. Fisher.....	2 00

ALEXANDER MARSH, *Chairman.*

REPORT OF THE LIBRARIAN.

To the Members of the Worcester County Horticultural Society:

The condition of the Library is such that a lengthy report is not needed. The Librarian is sorry to say that the books and publications furnished by the Society have not been as extensively used by the members as they were last year, and he believes it to be the result of the discontinuance of our weekly meetings. It is believed that our efficient Library Committee intend to place such books on our shelves as are of real value, and to furnish such publications as have the best reputation.

Additions to the Library during the past official year both by purchase and donation, are as follows:

Report of the Commissioner of Education for 1874; from John Eaton, Commissioner.

Gardening for Pleasure; by Peter Henderson. Society.

Natural History of Plants; H. Burlton. Vol. 4. Society.

Twelfth Annual Report of the Board of Charity; from Hon. Edward Earle.

Transactions of the California State Agricultural Society, 1874; from O. B. Hadwen.

Transactions of the New York State Agricultural Society, 1870.

Schedule of Prices of Massachusetts Horticultural Society, 1876; from E. W. Buswell, Treasurer.

Transactions of the Massachusetts Horticultural Society, 1875, Part 2d; from E. W. Buswell, Treasurer.

Agriculture of Massachusetts, 1875 and 1876, by C. L. Flint; from O. B. Hadwen.

Trees and Shrubs of Massachusetts, by George B. Emerson; 2 vols. 8vo. Society.

Floral Magazine, 2 vols., 1874 and 1875, bound. Society.

Journal of Horticulture, The; Vol. 25, bound; London. Society.

Florist and Pomologist; a Pictorial Monthly Magazine of Flowers, Fruits and Horticulture, conducted by R. Hogg, J. Spencer and T. Moore, 8vo. col. plates; London, 1875, bound. Society.

Seventh Annual Report, State Board of Health; from the State Board of Health.

Flore des Serres et des Jardins de l'Europe Annales Générales d'Horticulture. L. Van Houtte editor and publisher. Tome 20. 8 vo.; many cuts and col. pl.; Gand Belgigur, 1874. (Still publishing.)

Country Gentleman, The; Vols. 1 to 6, 1868-1872, L. Tucker & Son and J. S. Thomas, 650 engravings; from Geo. Cruickshanks.

Garden, The; an Illustrated Weekly Journal of Gardening in all its branches. Founded and conducted by Wm. Robinson, London, 1876. (Still Publishing.) Society.

Gardener's Chronicle, The; 1876, folio. Society.

American Agriculturist, The; Vol. 35, 1876, folio. Society.

Country Gentleman. The; Vol. 41, 1876. Society.

Agricultural Gazette, The; 1876, London Folio Society.

Gardener's Monthly, The; Vol. 18, svo. Society.

Villa Gardener. The; 1876, svo., London. Society.

Massachusetts Ploughman, The; Geo. Noyes proprietor and publisher, 1876, from George Noyes.

It may be proper to state that the balance of the bill for Curtis' Botanical Magazine, mentioned in the Librarian's report of last year, has been cancelled, as will appear by the Treasurer's Report, \$170.80 having been paid from the appropriation of the Library, and yet there is over \$100 of the appropriation unexpended. Seven books and three pamphlets only, are now out, and those are in good hands.

All of which is respectfully submitted.

JOHN C. NEWTON,

Librarian.

HALL OF FLORA, Nov. 1st, 1876.

ANNUAL REPORT

OF THE

Secretary of the Worcester County Horticultural Society.

To The Members Of The Worcester County Horticultural Society :

In his ANNUAL REPORT for 1875, your Secretary informed you that "your co-operation has been solicited by the UNITED STATES CENTENNIAL COMMISSION. What precise shape, such co-operation can assume, your Secretary is unable, at present, to state. It has occurred to him, however, that you might in the event of a discontinuance of the ANNUAL AUTUMNAL EXHIBITION, propose premiums for Fruits that have originated within the County, in amount sufficient to compel the production of the very best specimens. Those specimens that gained the premiums should become the property of the Society, to be exhibited at the proper time in Philadelphia. The County need not be ashamed of its parentage of the Holden Pippin, the Hubbardston Nonesuch; or, as suggested by our President, the Sterling. And, in this presence, may I not add also, among pears, Earle's Bergamot? Should you conclude to comply with the request of the COMMISSION, it might be well to act in connection with the Massachusetts Horticultural Society. A display by ourselves alone would be meagre, even if space could now be secured; but it would, doubtless, in aid of that venerable Society, help achieve something for the fame and name of our ancient Commonwealth."

At a meeting of the TRUSTEES, held pursuant to a special notice, the whole matter of a proper representation of the Society at the Centennial Exhibition, was referred to a Committee composed of the President, Secretary, and Treasurer, with power to act. No immediate steps were taken, as none seemed urgent. But, upon a later notification from the Director-General of the Exhibition that a Pomological Display was definitely assigned for a certain date, the Committee met and approved a proposition from your Secretary, to invite and hold a competitive trial of select specimens of Apples and Pears, on Wednesday, the 6th day of September, ult. ; the varieties, whether of Apples or Pears, being such as were specified in the schedule of the Society. An earnest appeal to the Pomologists of the County was also published in the newspapers of the city of Worcester, soliciting their co-operation and support. The response, although not so general as had been hoped, was, nevertheless, encouraging, and indicative of cordial sympathy. There were eighty-nine (89) plates of Apples offered, from which fifty-three (53) were selected. For the information of the members of the Society, and especially for the guidance of those who shall be its officers in 1876, a list of the varieties transmitted to Philadelphia is herewith submitted.

Alexander,	Pippin, Holden, 2 plates,
Baldwin,	“ York,
Beauty of Kent,	“ Nash,
Beauty Mills’,	“ Worcester County,
Beauty Sutton,	“ Fall,
Colvert,	Pomme Water,
Chenango Strawberry,	Porter, 2 plates,
Codlin, (Dutch),	Primate.
Cogswell,	Russett, Golden, of Mass.,
Drap d’Or,	“ Sweet, 2 plates,
Foundling,	“ Roxbury, 2 plates,
Gravenstein,	“ Singletary, (Millbury),
Greening, R. I.,	Spy, Northern,
“ (Nameless),	Spy, Worcester, (local)
Hamburg, 2 plates,	Sweet, Pumpkin, 2 plates,
Hawthornden,	“ Ramsdell’s,
Hubbardston Nonesuch,	“ Leicester, (local)
Jewett’s Fine Red,	“ Native,
King of Tompkins County,	“ Tallman,
Leland’s Spice,	“ Stockwell Winter,
Lovell,	“ Weyer,

Maiden's Blush, 2 plates, Mother, Canada, Ounce — Twenty, Native, (of Millbury),	Seedling, Nash's, from Northern Spy, Seedling, Salisbury's, Williams' Early Red.
--	---

There were seventy-one (71) plates of Pears contributed, from which thirty-seven (37) were picked out as of sufficient excellence. With the same laudable intent of enlightening posterity, the varieties of Pears, so chosen, are also placed upon record.

Bartlett, Belle Lucrative, Beurre d' Amanlis, Beurre de l' Assomption, Beurre Clairgeau, Beurre d' Anjou, Beurre—Golden, Beurre Hardy, Beurre Langelier, Columbia, 2 plates, Des Nonnes, Dix, Doyenné Boussoe, Doyenné du Comice, Duchesse, Durandean, 2 plates,	Flemish Beauty, Goodale, Howell, Hovey—Dana's, Louise Bonne de Jersey, 2 pl., Mt. Vernon, Paradis d'Automne, Seckel, Sheldon, St. Ghislain, St. Michel, Seedling, (Native from West Boylston), Washington, Winter Nelis.
---	--

Of all these varieties of Apples and Pears, how many will be popular — possibly even extant — a century hence? If the publication of these lists shall be of no other use, it may at least enable my successor, at the close of another hundred years, to point a moral, as he traces the survival of the fittest in the Pomology of his day and generation.

The MASSACHUSETTS HORTICULTURAL SOCIETY, with characteristic and ready courtesy, tendered us a portion of the space seasonably secured for its own use; and the offer was thankfully accepted. And, as it was thought best that our contribution should be sent direct from Worcester, Messrs. J. C. Newton and Henry Phelps were put in charge of it, to attend to its safe delivery and proper arrangement. To their energy and promptness is it owing that a gross blunder in transmission was remedied, at no greater cost than the personal inconvenience to which Mr. Newton, in an especial manner, subjected himself.

Of that Pomological Exhibition it is hardly necessary to speak at length. It was announced as an "Exhibition of Northern Pomological

Products," but, in juxtaposition to the Apples and Pears from Connecticut and Massachusetts, not more than two-thirds grown, were displayed the tropical fruits of California. The great States which have sprung up so rapidly, in the vast plains that stretch from the Mississippi to the Rocky Mountains, advertised themselves extensively and well. Through State organizations and Railroad Corporations, no pains were spared to proclaim the fatness of the land, so far as the cull and pick of their Fruit-crop could make the same known to advantage. That our modest contribution should reflect no discredit upon our Pomological knowledge and methods, is of itself partial praise. That it should reward judicious examination, as was the testimony of some who knew too well to estimate a collection solely by its extent, may be a satisfaction to those of you who furnished the specimens, to learn.

Upon one feature of this Pomological Exhibition, however, it would be impossible to enlarge in too strong terms of censure. Massachusetts, Ohio and New York were wholly unrepresented upon the Committee of Judges. The exclusion of their statues from funeral processions in the decadence of Ancient Rome, but served to recall to mind even more vividly the patriots Brutus and Cassius. And who of us, in looking through the roll of those who had been selected to adjudicate upon "Northern Pomological Products," could fail to note with amazement the absence of such names as JOHN A. WARDER, PATRICK BARRY, CHARLES DOWNING, JOHN J. THOMAS, and, — *clarm et venerabile nomen!* — MARSHALL P. WILDER. Honesty is an indispensable qualification for a just judge, but should not capacity also be deemed essential?

The AMERICAN POMOLOGICAL SOCIETY having accepted an invitation to a formal reception, at the hands of the Pennsylvania Horticultural Society, on the evening of Friday, September 25th. ult., and requested this Society to accredit delegates thereto, the following named gentlemen were duly commissioned under our corporate seal, viz. : President William T. Merrifield, and Messrs. Stephen Salisbury, D. Waldo Lincoln, J. Henry Hill, Francis H. Dewey, Alexander H. Bullock, George W. Richardson, George E. Francis, O. B. Hadwen, Edward W. Lincoln, Edward Earle, Paul Whitin John C. Newton, Nathaniel Paine, Stephen Salisbury Jr., Henry Phelps, Henry L. Parker, William H. Earle, Newell Wood, William T. Harlow, George Cruickshanks, William W. Cook, Frank J. Kinney and Thomas M. Lamb. Owing to the occurrence of our own ANNUAL AUTUMNAL EXHIBITION, so early in the ensuing week, your Secretary could not await this Reception, and has therefore no personal experience of it to relate. Other delegates, however, describe it as quite as successful as could be expected, when the attractions

of the Centennial Exhibition and the inevitable fatigue of its visitors are considered. And over and beyond all—creating depression and foreboding sadness—was the enforced absence of PRESIDENT WILDER, in whose illness was universal sympathy, and without whom any attempt at festivity seemed a cheerless mockery.

Criticism of the Horticultural Exhibition in the halls of the Pennsylvania Society would be an ungracious return for an act of hospitality. But surprise may well find expression at such a meagre display, from a field so extensive and fertile. Take away the collections of Ellwanger & Barry, and of Marshall P. Wilder, from a distance; and of two or three large cultivators from the immediate vicinity, and what remained would scarcely compare favorably with the average at our weekly exhibitions. Some fine plants were staged—the property of wealthy amateurs; but the Floral Designs were in funereal and the worst possible taste.

It would be wrong to dismiss this subject, without some acknowledgement of the unvarying courtesy experienced by all your delegates to Philadelphia, as attested by their common consent. Countless questions answered with unflinching civility; direction given to distant objects of interest, at personal inconvenience, by utter strangers; a cheerful readiness to oblige at all times, and everywhere; these slight but inestimable amenities of casual intercourse could not but impress all of us, who had trusted our lives to that avarice which crowded the Sound Steamers to suffocation and answered natural remonstrance with innate boorishness. To have had even temporary acquaintance with such a people will ever be a source of pleasant memories. Such oases in life's waste are not so numerous that one can be passed without recognition.

At a special meeting of the TRUSTEES, on the 20th day of February ultimo, it was *voted*: "That the use of the Hall and the Library of the Society be tendered to the State Board of Agriculture, during its country meeting, which is to commence on the Fourteenth (14th) day of November proximo."

Also, *voted*: "That in the event of an acceptance of this invitation, there be held simultaneously, in one of the Halls of the Society, a Free Exhibition of Flowers and Fruits grown any where within the State."

No reply was ever received by your Secretary, to his letter conveying your invitation. He has reason to believe, however, that it was gratefully accepted. It will therefore devolve upon this Society to adopt such measures as may commend themselves, in order to give complete effect to those votes of the TRUSTEES. A public and social Reception, in the evening, suggests itself, whereat delegates and visitors may have an opportunity of becoming better acquainted with each other than would

be afforded in the restriction of official intercourse. And, upon all accounts, whether for public advantage or the credit of the Society, it is greatly to be desired that we should tolerate nothing, within our power to prevent, which may have even the semblance of a wish to measure or stint our proffered hospitality. These meetings of the State Board of Agriculture are always a benefit; especially to the localities in which they are held, and which choose to profit by their opportunities for instruction. It is no argument in their disfavor that individuals may attempt their perversion into occasions for personal display: or that bores—of greater or less mitigation—exhaust a reluctant audience by the compilation and utterance of meaningless statistics or duller platitudes. There are said to be places wherein “Angels fear to tread;” *but they are never solitudes*. Let it be our privilege, separating wheat from chaff, to extract its nutriment from the one and to disperse the other to the four winds. Let us, if we sit at the feet of Gamaliel, gather up his words of wisdom, nor reproach the sage, should his feebler disciples sometimes maunder.

The property of the Society, of whatsoever nature, has been kept throughout the past year in an admirable condition. For this pleasant state of affairs, in such marked contrast to what was customary when the hall was suffered to become an object of speculation, our thanks are due to the efficiency and vigilance of our Librarian and Treasurer. Nor should it be forgotten that we have been fortunate in the character of our tenants, the prospective loss of one of whom is looked forward to with regret. It is not unlikely that improvements in Horticultural Hall may soon be required of us, alike in our own interest and in justice to the occupants of the stores upon the first floor. Competition is so active, the relation between supply and demand has become so close, that the owner whose building offers the most conveniences can command the most desirable tenants. This Society has never countenanced extortion, nor desired to take undue advantage of the necessities of those with whom it has so long sustained a pleasant connection. It will doubtless appreciate the effect upon real estate situated like our own, of the occupation of the Union Railway Station, and authorize the Trustees to gratify a request which seems but reasonable, that the first floor should be better adapted to its uses.

For several years past the Society has endeavored to stimulate the introduction of new varieties of PEARS, by offering premiums for the fruit of specified kinds. The cost of a single tree of a new variety is very considerable, while even of *scions* it is by no means trifling. Besides, the cultivator is liable to be imposed upon, having palmed off upon him

spurious or worthless species. A very valuable contribution to our knowledge of varieties is furnished by that eminent orchardist, Mr. John Scott, of Merriott, Somersetshire, England, in an elaborate tabular analysis of Pears which have ripened with him, *upon a light, sandy loam*, during the months of September and October, A. D. 1875. He remarks that only those of first-rate quality are given, adding that it was a very unpropitious year for the ripening of hardy fruits, and "Both size and flavor are much under what they are in the average of years. All the sorts enumerated were carefully examined, tested, and proved to be true to name." At the risk of challenging too much of your attention, I have taken pains to collate from that table, feeling sure that, in common with myself, you will value the experience of an observer so competent, nor esteem it less because obtained without cost. Some varieties are retained, with which we are already familiar, because it is interesting to note how they thrive under the climate of England, "in a light, sandy loam."

This table for October is as follows :

Alexandre Lambré : Second size, rich and delicious, with a fine, honied flavor.

Barry : First to second size, juice excessive, vinous, sugary, deliciously perfumed. Remarkably fine.

Beurré de l' Assomption : First size, juice abundant, acidulated, sugary, and highly perfumed. Remarkably fine.

Beurré Bosc : Second to first size, juice excessive, refreshing, and highly perfumed. Remarkably fine.

Beurré Diel : Second size, sometimes first-rate and often second-rate.

Beurré Hardy : First size, one of our best large pears, juice abundant. Remarkably fine.

Bonne d' Ezeë (miscalled Brockworth Park) : First size, juice very abundant, with an exquisite flavor.

Dix : First size, very juicy, rich, sugary, vinous, and perfumed.

Doyenné (white) : Second to first size, very juicy, aromatic, savory, and delicate.

Emile d' Heyst : Second size, very juicy, acidulated, and refreshing.

Fondante du Comice : First size, very melting and deliciously perfumed. Remarkably fine.

Gen. Todleben : First size, a delicious, melting, and highly perfumed sort. Remarkably fine.

Hovey : First size, melting, sugary, acidulated, juicy, and savory.

Maréchal de la Cour : First size, a delicious pear when grown on the Quince.

Marie Louise : Second to first size, well known to be especially fine from a Quince double-worked. Remarkably fine.

*Orpheline d' Enghien (Glou Morceau) : Second size, very melting, juicy, sugary, and delicately perfumed. Remarkably fine.

Pratt : First size, melting and very delicious here. It is not so in all soils.

St. Michel Archange : First size, very melting, very juicy, perfumed and sugary. Remarkably fine.

Souvenir du Congrès Pomologique : Second to first size, melting, juicy, sugary, rich, and delicious.

Sheldon : Second size, very melting, juice most abundant, sugary, aromatic and delicate. Remarkably fine.

Seckel : Third size, nearly, if not the most delicious of all Pears.

Thompson : Second size, one of the finest Autumn Pears, delicious. Remarkably fine.

Tongrés : First size, a noble and truly delicious, beautiful fruit. Remarkably fine.

Mr. Scott says that the " Early Pears should have preceded the above, " but I had not proved them sufficiently as they ripened. The thought " struck me after I had housed all my fruit and arranged them numeri- " cally. On looking at them I thought I might never have such another " chance of proving them : having before my eyes over 800 sorts, I at " once determined to test every one of them, and the list sent is the best, " or what are considered the superior sorts. I tested many others, but " considered them inferior, and determined to admit only the best. I " know, however, that they will not all be best, in every kind of soil ; " and that many of those I have rejected would prove superior to some " of those enumerated."

This table for November is reproduced in very limited measure :

Althorpe Crassane : Second size, a delicious, hardy, English pear, that bears enormously.

Belle de Noel : Second size, a delicious sort, ripe from October to January,

Bézi Esperen : Second to first size, melting, very juicy, sugary and aromatic.

Beurré Berckmans : Second size, juice excessive, with a delicious and refreshing flavor.

Beurré Delaunoy : First size, melting and delicious, juice plentiful, with a very exquisite flavor.

Beurré Gendron : First size, melting and delicious, ripe from October to June, and resembling Chaumontel in everything but flavor.

[*This Pear would be at least six weeks later in Worcester. But as the Blight bids fair to exterminate the variety, the date of its maturity cannot much matter.—E. W. L.]

Beurré Langelier : Second size, flesh melting, juice abundant and savory.

Beurré Phillippe Delfosse : Second size, very melting, very juicy and sugary, and highly perfumed.

Doyenné du Comice : First size. This is, in my estimation, the finest of all Pears, more especially when grown on the quince stock.

Hébé : First size to very large, flesh fine and very melting, juice abundant, sugary, and very acidulated. I imported this splendid Pear from America in 1870. It was a seedling between Beurré Easter and Duchesse d'Angoulême.

Marshall P. Wilder : First size, flesh very melting and fine, juice excessive, sugary, and deliciously perfumed.

Onondaga : First size, melting, juicy and sugary, but of no great flavor.

Soldat Laboureur : First size, flesh melting, juice excessive and deliciously perfumed.

Van Mons. Leon Le Clerc : First size. One of the finest Pears in cultivation.

Mr. Scott says that he was given "a very carefully selected list of all the finest November Pears. I have many others that I felt tempted to give a place in the list, but, having set out with a determination to eliminate all that did not fully reach the highest grade in quality, I reluctantly withheld some kinds that were, by comparison, only a little lower in the scale than those just named" He also remarks that some, in each of his lists, "will be found to ripen in the month preceding and succeeding the periods assigned ; i. e., some of the early October sorts will be ripe in the end of September, and some of the later kinds will run into November."

Mr. Scott has also furnished a condensed list of the choicest December Pears, as they approve themselves to him after test, upon which, in his judgment, growers may rely with confidence. Among them are the following, more or less familiar to the members of this Society from actual experience or accredited reputation :

Alexandre Lambré : described in November list, but good also for December.

Bergamotte Esperen : Second to first size, very melting, very juicy and delicious. This is, if not the best, at least one of the best Winter Pears. Bézi d'Esperen is often sold for it, but it does not keep so long.

Beurré Bachelier : First size, melting, juice excessive, sugary, delicate, and perfumed.

Beurré Berckmans : First size, very melting, juice excessive, refreshing and delicate.

Beurré Defay : First size, melting, very juicy, sugary, vinous and delicate.

Cadet de Vaux : First size melting, juice excessive, rich and savory. Continues from December to March and sometimes to May.

Comte de Flandres : First size extremely juicy, rich, aromatic, and exquisite.

Doyenné d' Alençon : Second size, very melting, very juicy, sugary, and aromatic.

Duchesse de Bordeaux : First size, melting, very juicy, refreshing and delicate.

Figue d' Alençon : First to second size, juicy, buttery, and highly flavored. This delicious Pear requires a warm soil to bring it to perfection.

Graslin : First to second size, very melting, juice excessive, sugary, delicate, and perfumed. M. Decaisne says that this and B. Superfin are the same; but they are entirely different. One ripe in October, the other in December.

Josephine de Malines : Second to third size, flesh very fine and melting, juice excessive, acidulated, and perfumed. A valuable Pear.

Mariette de Millepieds : First size, flesh very fine and melting. juice excessive, sugary, acidulated and exquisitely flavored, in eating from December to April. A valuable Winter Pear.

Passe Colmar : First to second size, flesh melting and odoriferous, juice excessive, very sugary, vinous and perfumed.

Suprême Coloma ; First size, flesh fine and melting. juice excessive, sugary and delicate. Ripe in November and also delicious in December.

These comprise but a fraction of Mr. Scott's extended list; but they are all regarded by him as his "best December Pears." He says that "He always deemed the late Autumn and Winter Pears to be the most delicious; they are richer and more aromatic than the early kinds, which have often nothing to recommend them but their juiciness and sweetness, although there are a good many exceptions."

Mr. Scott was the first to expose and denounce the attempted fraud of the Brockworth Park. And, although it is doubtful if the tendency among ourselves to limit the list of Pears, whose culture is desirable, can or should be checked, there can be no dispute about the value of an experience based upon the test of a thousand varieties. It is quite likely that none of us may care to try any of the kinds just described, in a "light sandy loam," or upon a hard clay subsoil; but it is absolutely certain that the sum of our knowledge is just so much augmented by the volume and thorough precision of his practical observations. With each

passing year we are taught, more and more forcibly, how slight is the amount of our positive information. It is but a twelve-month since I confidently asked if any one had ever known the Seckel to be affected by the Blight. Individual experience has already enabled me to answer my own question in the affirmative. If then there is no variety which can be regarded as proof against disease, the main argument in favor of restricting ourselves to the kinds heretofore cultivated loses its whole force. For, in that event there is every inducement to experiment, by cross-fertilization or seedling, until all hope is destroyed; or something is obtained, whose healthy and hardy nature shall prove perfectly satisfactory. If the Seckel, and its like, prove untrustworthy, gone is the theory of Col. Wilder, in favor of depending hereafter upon native varieties. Nature supplies no analogy to warrant a belief in the continued immunity of a species, simply because of its nativity. During the present epidemic in Savannah the black race has not maintained its usual average exemption. Are we not absolutely compelled to fall back upon natural selection, and confessing our own helplessness, to found all our future hopes upon the survival of the fittest? Over and beyond that are the experiments of Mr. Scott, to show what one man has accomplished, and to indicate a path in which others may profitably follow.

The ravages of the Blight during the past season have been general and excessive. As already stated, the Seckel, hitherto considered invulnerable, has succumbed, partially at least, to the attacks of this inexplicable disease. The Louise Bonne de Jersey, one of the hardiest varieties under cultivation, has failed of its usual immunity. Kinds less frequently met with, because of more recent introduction, (the Beurré Superfin for example), have been, in too many instances, literally destroyed. For that is destruction which leaves but an unsightly limb or fruitless stump, after long and weary years of patient culture and hope. In the extension or communication of this disease to the Apple, strange as it will seem, may lie our only prospect of discovering a remedy. When the Orchards of the State are in vital danger, the men who have stoutly upheld the supremacy of cider, refusing to mortify the flesh of Massachusetts, may contrive to overcome the inertia of the General Court. Commissions were created, and the medical faculty seriously exercised in an effort, fortunately successful, to stamp out of existence the plague of Pleuro-Pneumonia. The loss of the Fruit trees alone, in the Commonwealth, would not be an insignificant item in the aggregate of its resources. But that loss would be infinitesimal when compared with and weighed against the inappreciable value of the Fruit itself to the enjoyment and actual health of the people. The optimist will say that there is no danger ;

pointing to the enormous apple crop of the present year to support his cheerful view. But such crops are terribly exhaustive. Few young orchards are planted, and the complaint is universal that they fail to repay the original cost. Too often are they set out in soil from which every element essential to growth and fecundity was long since eliminated. Oftener than not do they betray some fatal taint of inherited disease, fatal to themselves and infecting all in immediate contiguity : and in the majority of instances they are left to struggle as best they may, without fertilization, their trunks moss-bound and swarming with insects, and with roots either water-logged or parched from careless neglect of mulching. We cannot explain the mystery of their bearing fruit at all. But still less can we account for the persistency with which they yield their harvest, in defiance of such manifold obstacles. Even should the Fruit-crop never totally fail, it cannot be denied that it might be made more perfect. Nor can it be doubted that Science, assured of suitable remuneration for its investigations, could solve most of the problems that now puzzle us, supplying remedies for disease and methods of prevention from insects. Would not such a consummation be of as great benefit to the community as the attempt, hitherto fruitless and always painful to behold, of veteran politicians to be born again !

The disappearance of the QUINCE from the Exhibitions of our Horticultural Societies grows more sadly evident with each recurring year. Some time since it was hoped that its failure might be accounted for by the intense frost that heretofore swept the Cherry from existence. But young bushes succeed no better, apparently lacking vigor to endure even a moderate winter. The cherry trees have been replaced and, when let alone by the Aphlis, return a bountiful crop. But there seems to be but little constitutional vigor remaining in the Quince. It is rarely seen, save at some old farmstead, where, among weeds and under neglect, it maintains the arduous struggle for an unprofitable existence. Yet it is a fruit of exceeding value for domestic uses, and its cultivation would doubtless repay its successful grower. At present the poorest specimens command Five Dollars per bushel. They must be Apples of unusual excellence which will bring in to their owner One Dollar per barrel. Diversity in the pomological harvest is as indispensable as in the other branches of Terraeculture. The planter who raised nothing but cotton became rapidly impoverished. The orchardist, who grows apples only, has himself to thank for a glutted market and an empty purse.

The Horticulturist has been compelled to wage fierce battle, throughout the past season, with old and new insect foes. The Canker-Worm was quite prevalent and proved constant in his devotion to the

apple and cherry. The inhabitants of cities are personally concerned in this matter; since, in default of the cherry-tree, the Canker-Worm is evidently persuaded that he might go further and fair worse than upon the elm and maple. Could the General Court be induced to grant the petition of the Dedham Fruit-Growers' Association; seconded and enforced as it was by the Massachusetts Horticultural Society; there might be some hope that our orchards would not annually look as though ravaged by fire. The watchful care and intervention of a competent forester, or ranger, clothed with authority to abate, upon private property, that public nuisance to whose existence the owner was indifferent; *and at the expense of such owner*; would supply a speedy and effectual remedy for a growing evil. But, so long as Rusticus is soothed in a morning lullaby, to a lingering nap, by the strident note of the *Turdus Migratorius*; fancying it the strain of an American Nightingale; just so long and with like reason will he tolerate or prolong all other animated existence that is equally useless and destructive. The average Yankee will have his common school. But no law—human or divine, makes it imperative upon him to cultivate common sense:—more s the pity!

In his Annual Report for 1866, your Secretary announced the slow “but sure advance from the Western States of the Republic, of another fearful pest—*Doryphora decemlineata*—the ten (10) lined spearman; a new potato-bug. This insect is said to be advancing eastward at the rate of fifty (50) miles a year.” And a hope was expressed that before it reached our border, some easier and quicker method for its destruction might be devised by the scientific skill and practical sagacity of our friends at the West than that of picking off by hand. And again, in 1867:—“The account from the Western States of the destruction caused by the *Doryphora decemlineata*, or ten-lined spearman, to the existence of which insect your attention was invited in the Report of 1866, are well calculated to awaken increased alarm among cultivators of the potato. It is astonishing, and would be disgraceful were we authorized from their past history to expect anything better, that our State Societies and Boards of Agriculture should await, with such stolid indifference, the steady appearance of this pest.” These citations, if showing nothing else, at least demonstrate that some of the sentinels upon the watch tower of Horticulture are vigilant and keen to espy the enemy while he is yet afar off. But the Colorado Beetle has arrived, at last, although for the present calendar year only in skirmishing order. During the past season he was apparently occupied in surveying our defences, and *strengthening his own forces*, which last he has a wonderful faculty and facility for doing. And still, all that we are permitted to

hear from our institutions of learning, or men of science, when such imminent danger threatens an important interest of the Commonwealth, is that "State Entomologist (!) Packard discourages the application of "Paris Green, on the ground that it is an expensive and dangerous "poison." The entire State is excited, watching with kindly interest, or pitying curiosity, the frenzied efforts of political parties for reform within themselves. But when the material welfare of the Commonwealth is imperilled, a solitary voice is heard warning the gardener and farmer against the use of a safeguard which has approved itself efficient and innocuous. Universal experience from the Mississippi to the Hudson is contemptuously ignored; and conceited science, as so often before—exclaims in self-complacent serenity—"So much the worse for the facts!"

"The man recovered from the bite.

"The dog it was that died."

The employment of White Hellebore against the Currant-Worm, *Abraxis grossulariata*, was similarly discouraged. Yet man has continued to dust it over his bushes; and life, not death, has been in the breath of his nostrils. Caution is demanded of us in every work of life. But we cannot refrain from walking, because we might stumble and fall. Nor should we reject an experience founded upon thousands of actual tests and thoroughly justified by them all.

The extreme and, if tradition can be trusted, Centennial heat to which Massachusetts was subjected during the Summer of 1876, seriously affected the products of our Gardens and Orchards. The season of early fruit was hastened by at least a week, although frequent showers in June measurably promoted and sustained the fecundity of the Strawberry. Of this, plantations had been much winter-killed, owing to the sparseness of snow; yet a propitious Spring renovated the stools and afforded a crop which was perhaps a fair average. But the Drought was extreme at the proper time for the Raspberry to ripen; and some (not wholly unskilled) growers had to content themselves with pints instead of their accustomed pecks. There can be no doubt that the cultivation of the Blackberry by our members has almost wholly ceased, although the discontinuance of our Weekly Exhibitions prevents any positive test of the fact. But the competition with the peach is too much for it; and a temperature of 106° in the shade is oppressive to the man who can only look for a ninepence per quart. A curious fact, corroborating the observations of a few years ago, when the season was very similar, is the effect of such torrid heat upon the Pear. Some of the choicer, thinner-skinned varieties, have proved, when thoroughly matured, to be

utterly destitute of flavor. That superb variety, the Beurrè Bosc, proved mealy, rotted at the core, and every slight defect became a source of rapid decay. And the specimens which turned out so inferior were fully equal to the lot that was honored with your premium at the AUTUMNAL EXHIBITION. The present promise of the Winter Nelis, similarly distinguished, is little if any better.

In the judgement of your Secretary, the earth has never entirely recovered from the protracted drought which necessitated our first pumping experience in this city of Worcester. Deep snows are invaluable, as compared with every other source of supply, and these have not been vouchsafed. There have been sudden and violent storms; but frost "held the fort" and the floods were compelled to find vent, sweeping before them the *débris* of dams and the wreck of reputations. Meanwhile evaporation is continuous, and plant and blade and tree absorb at every pore. The "candle burns at both ends." The rootlets will retain every drop that they can intercept; the air will abstract each particle that can be subjected to the mighty attraction of the Sun. At this present writing, could we but count with certainty upon a snowy Winter, we might safely rely upon a permanent change for the better. Frost cannot effectually close a soil so loose and porous. The silent flakes cover and melt into the ground, replenishing exhausted nature in her every vein. Let us remember, if we reluct at clearing sidewalks in the crisp mornings, or find the drifts deep and hard to break through, that it is, after all, but the principle of gravitation which resumes its suspended beneficence, and, if slowly, yet surely, brings apples to our grist.

Some years ago, our late honored associate, John Milton Earle, called your attention to a seedling, russet Pear, originated by himself which, with his consent, was named Earle's Bergamot. At the late AUTUMNAL EXHIBITION, Mr. Velette P. Townsend, of Quinsigamond Precinct, by whom it has been assiduously cherished, placed upon our table some superior specimens. Your Secretary would not intrude upon the province of his accomplished friend, the chairman of the Pear Committee. But he cannot refrain from advising a wider dissemination of this new variety, of local origin, that it may be known if it will preserve its conceded excellence under different conditions. Should it do so, this Society may well felicitate itself upon the acquisition of a memorial of our late associate, more tangible, if less impressive than the speaking likeness which now looks down upon our transactions.

At a meeting of the TRUSTEES, holden on the 10th of February, ult., it was voted: "That the Committee on the Library be instructed to procure, if attainable, an accurate likeness of Hon. Daniel Waldo, our

“earliest benefactor, and suspend the same in Horticultural Hall.” Through the kindness of Mrs. Hester Wetherell, the Committee were enabled to make use of a portrait of Mr. Waldo, in her possession, which, if not all that might be desired by those familiar with the benign features of the deceased philanthropist, served as a sufficient groundwork for the very satisfactory work of art that you now behold. Many of you realize that, but for his generous gift, you would scarcely have possessed this valuable property, this Horticultural Library, Hall, and the Furniture indispensable to the use of the latter. For it was bestowed in the infancy of the Society, when a friend in need was a friend indeed. But few of you know, possibly, that he took a deep interest in the formation of the Society, recommending it when others hesitated, and affording a hearty coöperation in aid of the first timid steps. His portrait could nowhere be more at home than here in this Hall of Flora.

It is my earnest trust that you will continue the practice of perpetuating the memory of our benefactors, so happily inaugurated. Our first President would fitly grace a vacant panel with his marked lineaments. Nor let us object, should any of those who have followed him, in course, anticipate the action of the TRUSTEES; and, of their own accord and munificence, assume their proper representation upon these walls.

At a meeting of the TRUSTEES, upon the 12th day of February, A. D., 1862, it was voted to remove the Library from the place where it had been so long accommodated, and to locate it permanently in Horticultural Hall. In his Annual Report for the year, dated January 8th, A. D., 1863, your Secretary made the following statement:

“Simultaneous with the removal of the Library and its permanent location in the Hall of the Society, a system of voluntary Weekly Exhibitions of Flowers and Fruits was commenced, which has been continued with marked success to the present day. These Exhibitions, dating from the 27th day of February, 1862, sometimes rendered instructive by discussions and by the statement of matured experience, were almost invariably illustrated by the display and actual trial of a great variety of Fruits, whether of the better-known sorts, or of the newer and rarer species. Our larger cultivators, from their well-stocked greenhouses, early afforded lavish exhibitions. A Report which the Secretary, by some happy chance, was inspired to prepare for the press, first attracted public attention; and the visits of those not members, thus induced, grew more constant with the steadily augmenting value of the Exhibitions.”

The interest thus awakened was never suffered to subside. For a period of fifteen years, upon each recurring Thursday, were the members of

the Society, and others inclined to Horticulture, went to meet together in this Hall. Here, upon well-filled tables, could they find, with invariable assurance, the thoroughly ripened specimens of our larger cultivators heaped up in bounteous profusion. Hither came EARLE and COLTON, GRANT and RIPLEY, with D. WALDO and LEVI LINCOLN, to discuss the comparative or positive merits of varieties, and to impart the conclusions drawn from wide and life-long experience. At these Exhibitions did that skillful orchardist and diligent seeker after novelties, John C. Ripley, first solicit your attention to such Pears as the Gen. Todleben and Josephine de Malines, with many others of unequal merit. And thus too were you first made acquainted with the Doyenne du Comice and Earle's Bergamot,—the latter, by the way, fast winning for itself a first-class reputation. Hither, too, came Eames, with his Worcester Spy, and Newell Wood with the Red Russett and Stockwell Winter Sweet,—each and all Apples of merit, whose introduction under your auspices tended to fulfill the purposes for which your Charter was obtained,—*to wit* : “Of advancing the Science, and encouraging and improving the Practice of Horticulture.” And when, in later years, the storm and passions of war had drifted, leaving the humaner nature to return to that cultivation of the Earth wherefrom Cincinnatus and Washington were wrested, and to which they so gladly returned,—saviors of nascent and heroic Republics,—it soon became plain that the amenities of life were not absolutely tasteless to those whose more recent walks had been among the wastes of the Cotton-plant and the Rice-field. But cities had enlarged, and towns were grown to cities. The garden and small orchard, surrendered to the carpenter and mason, yielded no longer the usual returns of Triomphe de Gand and Bartlett. Yet, in lieu of them, uprose the conservatory and window garden; and from the limited Eden thereby obtained, the modern Eve, fearless of temptation and exempt from sin, culls as she likes, and as she culls, enjoys. So does the Florist succeed the Pomologist. It may well be doubted if the voluntary display of Fruit within the last few years, had sensibly diminished. But there can be no dispute that the Floral Exhibitions were augmented, to the dullest perception, by the zealous contributions of ladies who were unconsciously instructing themselves in Botany, and developing its rudiments in others. To all who had the welfare of this Society at heart, no more encouraging spectacle could be offered. Frequently something served to provoke investigation,—almost always a rich collection of the useful and beautiful in Nature, to challenge the attention of passing visitors. For many successive years, with monetary rewards too scanty to be considered, were these Floral Displays maintained. And the latest were the most successful, if we are to count for anything the multiplicity of contributors,—of whom a number exhibited a collection or design, for the first time.

All this,—regard it as you choose, either as a school of instruction or a harmless and healthy method of enjoyment,—the Society has deliberately and wantonly forfeited. At an adjourned meeting of the TRUSTEES, on the 2d of December ult., it was decided to substitute for those weekly meetings Two Monthly Exhibitions, in July and August; a schedule of Premiums being arranged for each and admission to both being free. This plan was carried out but partially, as you are all aware. The July Exhibition was precipitated into June, to secure Strawberries and Flowers—the most desirable of which latter, Roses, were even then past redemption. In August there was absolutely nothing left to exhibit. The torrid heat of an unusual Summer had parched foliage and bloom, withering alike germ and fruit. The Raspberry was an utter failure, as a crop, and its scanty yield would have supplied but a meagre basis for a public exhibition. The fact is that there are not enough persons engaged in Horticultural pursuits, in the vicinity of Worcester, to sustain in a proper manner an elaborate monthly exhibition. No schedule of premiums can be framed which will adapt itself to the varying seasons. At the weekly meetings this difficulty could be effectually obviated by authorizing and directing committees to make allowance for specimens of either Flower, or Fruit, that should have been forced into premature development owing to some peculiarity of location and exposure. For two years past the inflexibility of the Rules has worked injustice. The best display of Strawberries, in several varieties, has been excluded from premium because ripened before the absolute date of the exhibition. This was especially noticeable of the *Triomphe de Gand*, most excellent collections of which superior berry were early developed under conditions that have been deemed wholly unfavorable.

In his Report for the year 1871, Secretary Francis commented upon the error of making the whole interest of the public centre upon a single exhibition. He tersely remarks that “the unavoidable result is a certain sameness and an old story year after year.”

“Can we escape the evil of monotony by changing the season of the Annual Exhibition? I think not; for during no other week in the year are the productions of our gardens and orchards so numerous and varied. The true remedy is to magnify the other Exhibitions during the year. I am convinced that the horticultural resources of this vicinity would support, in a highly creditable manner, a series of weekly Exhibitions on a much larger scale than now, during a large part of the year, if only sufficient inducements were held to contributors and visitors by a liberal but judicious offer of premiums, by convenient arrangements in a pleasant room in a suitable location and by the presence of those known to be able and willing to give infor-

“mation upon subjects connected with that art which our society is organized to foster. These frequently recurring exhibitions have many recommendations which are obvious upon the slightest reflection ; one of them only will be alluded to here, namely, that the Annual Exhibition would naturally be compared, not with its fac simile of the previous year, but with the smaller and varied displays during the season.”

These opinions found acceptance, and for some years thereafter the policy of the Society was in accordance with them. The premiums were augmented, as the means of the Society permitted, and suitable accommodations were provided for all who chose to exhibit, in this Hall of Flora. Your Secretary does not propose to weary your patience by enlarging upon this topic. His last Annual Report dwelt at length upon the advantages of the Weekly Exhibitions. The positive loss enuring to the Society, as a whole, and to its individual members, from the experiment of their discontinuance, confirms his views. He does not believe that the Schedule of 1875 can be materially improved, except as the increase of resources shall permit you to offer greater inducements to contributors. And he would earnestly recommend the adoption of that Schedule of Exhibitions and Premiums, for the Summer of 1877, with only the necessary change of dates. In this way you may revive the interest of cultivators who have been alienated by a sudden, and, as they think, causeless reversal of a time-honored and prosperous policy. Thus, and thereby alone, can you regain the coöperation of ladies, whose zeal and taste, in the past, have contributed so essentially to your success. The benefits of restoring and renewing the mutual intercourse between Town and County, so hardly established and so easily broken, must be plainly evident to all of you by whom they were valued of yore, and to whom their loss has been a source of constant regret during the past year.

The opportunity for the exhibition of new Fruits was not the least of their recommendations. Several kinds, not alone of what are technically known as “Small Fruits,” but also of the larger and perhaps choicer genera, could have been shown in their season. Your Secretary might have learned that the *Aquilegia Chrysantha*, which he had purchased, was, in fact, the *Aquilegia Cerulea* ; and Mr. Salisbury, to whom the latter species was a novelty, would have so much sooner experienced the pleasure of beholding a handsomer variety than the *Chrysantha*. If there is a time for all things, what can there be better than the *right* time ? And of the exact date, each person must be his own judge, carefully watching development and realizing maturity, so that the obvious lesson to himself may be fraught with precious instruction to others. The true horticulturist seeks no concealment ; his ways, whether of tentation or

achievement, are plain to all. He asks not for caveat, he solicits no patent. Strangely enough for an American, he is indifferent whether protection shall protect. But do you not owe it to him, within your own limited sphere, to aid him in every possible mode of "advancing the science and improving the practice of Horticulture?" Of which methods the gratuitous dissemination of precise knowledge is by no means the least.

The indications of a sounder taste in matters of out-door decoration are heartily welcome. How often have we heard a sigh of regret that the English Ivy is not hardy enough to endure our climate, and that *therefore*, the home-porch, or church-wall must be deprived of delicate greenery or grateful shade. Yet all the while, by every corner and nook, and over all our stone fences, trailed a vine incomparably its superior. That this fact is appreciated, at last, is obvious to all who chance to pass by the edifices more recently erected for public worship in this City of Worcester. England, whose zealous and skilled Florists have so developed the latent possibilities of our Azalea and Rhododendron, has not found this American Climber too insignificant to notice. The attention of all who are interested in the more perfect adornment of the sanctuary and the home, is invited to the following concise summary of its merits: "*Ampelopsis Hederacea* (Virginia Creeper): This, which is found wild over a large portion of Canada and the United States, is a vigorous deciduous climber—reaching sometimes heights of from forty to fifty feet. With large digitate leaves of a warm, green color, in early Summer, but changing in the approach of Autumn to a bright red, giving the plant at that season a peculiarly grand appearance, amply compensating for its small, inconspicuous flowers, which, being of greenish white, are not of themselves attractive. This shrub is one of the most ornamental of hardy climbers, unrivalled for covering walls and houses, to which it clings closely and firmly with no other aid than that of its tendrils; and that few plants withstand the dust and smoke of towns so well is proved by the frequency with which it is to be seen growing and even thriving, on windows and balconies in the most crowded thoroughfares, with no other soil than that afforded by a shallow box, or moderate sized flower pot. In order to keep it tidy, it should be trimmed or pruned annually, the best time for the operation being in Spring, before it begins to grow." This last suggestion of the *Garden* can be fully endorsed by your Secretary, from his personal observation and trial. No one who has not tested it can have any idea of the advantages of close pruning. Whether it would be as beneficial to the newly introduced varieties from Japan—to the *Ampelopsis Veitchii*—can only be learned from actual experience. But, at any rate, let us hope that this graceful and thrifty climber may shortly be made to

conceal the myriad rocks and stumps which, far from disfiguring, would then beautify the landscape.

Your Secretary is happy to congratulate you upon the success of the late ANNUAL AUTUMNAL EXHIBITION. The display was of unusual excellence in many departments, and in but few was inferiority unpleasantly evident. The arrangement of the Plants was in the happiest taste, being charmingly adapted to the form of the Hall of Pomona, and at the same time suiting the convenience of visitors. And these latter, by the way, were especially numerous. Prominent among them was His Excellency Gov. Rice, who was profuse of compliment, remarking with evident sincerity that he was wholly unaware that Worcester County could hold such an exhibition, and that he should have been sorry indeed had he failed to see it. Mr. A. W. Cheever of the N. E. Farmer, writes concerning it, that "Having an hour to spare on Thursday evening, we took a look at the bountiful collection of fruits and vegetables, and the beautiful display of flowers and green-house plants. Of the latter, the President, Mr. Merrifield, had a large collection on the tables, including many that are both rare and beautiful. The arrangement of the fruits on the tables is a new one to us, but we believe is being adopted by other Societies. No premiums are offered for best collections, but each variety of fruit or flower is shown by itself, where the eye can, at a glance, see which are the most superior. This gives the visitor a much better opportunity to study varieties, than when they are scattered all over the Hall.

"The show of Apples is said to be one of the finest ever made by the Society. There are some two hundred plates shown by about forty exhibitors. Of Pears, there were three hundred plates, from over fifty exhibitors, but of Quinces, there were but four plates shown. This Fruit, which was formerly as cheap as Apples, seems yearly to grow more and more difficult to cultivate successfully, and the few bushels which are now found in our markets, bring quite extravagant prices. The exhibition of flowers was beautiful, but far beyond our power of description.

"The Horticultural Society during its long period of existence, has done a vast amount of good to the people of Worcester and the surrounding towns, by creating or stimulating a taste for improving and beautifying the homesteads and public grounds in and around the City. It has also encouraged the culture of Fruit and Flowers to an incalculable degree, but there is still work enough ahead, to require its influence for many a year yet to come. The great mass of people have hardly, as yet, begun to realize the value of choice Fruits as a constant accompaniment to the family table, or of the refining influence which

“Flowers exert upon the mind and character, both of the young and old.”

The mention by Mr. Cheever of our “system of arrangement” renders it not improper to state that the system, so happily approved by us, has commended itself to the Massachusetts Horticultural Society, and has, within the last year, been adopted by that venerable but wide-awake organization. That Society has also viewed, with favor, our method of designating varieties, and compliments us by requesting specimens to be used as models. In these facts may be found some slight excuse, for those of us who, acknowledging our provincialism, yet fail to envy others of superior leisure or better fortune, whose natural rusticity has taken such dazzling lustre from a casual metropolitan intercourse. If our light was not set upon a hill, neither has our talent been hidden in a napki and buried in the ground.

The imperative need of greater precision in Nomenclature is constantly claiming attention. Species are often displayed upon our tables,—not infrequently by the same grower,—which have no points of dissimilarity save the name. Among the Small Fruits, by which designation Berries of all kinds are understood to be included, this has been a source of serious trouble. In his Report for 1873, your Secretary remarked upon one feature of a Summer Exhibition, that—

“Too many of the lots of Currants were untrue to the accredited traits of the alleged varieties. Thus La Versaillaise, which has no especial characteristic, if not its long clusters, was misrepresented by stems bearing at least but five or six berries. The most experienced cultivators incline strongly to the opinion that the distinction between the Cherry and La Versaillaise is without a difference. But what if growers are not even careful to maintain a distinction? So, too, of the White varieties. There were displayed during the past Summer, boxes of White Dutch, White Gondouin, and White Grape; of very great similarity in appearance; and between which it would not be desirable to preserve any line of demarcation, unless elements of superiority are more obvious than was the case on the 17th of July. It is noteworthy that one noble box of Red Dutch surpassed in size its fashionable and modern rivals, as it notoriously does in flavor whenever and wheresoever put in competition.”

Among the manifold services rendered to mankind by the Royal Horticultural Society of England, in whose recent unmerited misfortunes all Horticulturists can but feel profound sympathy; none are greater, if some have been more conspicuous, than the Experimental Trials of varieties of Vegetables and Fruits, instituted and carried out under its auspices. At one time every known kind of Potato has been collected from far and near, from the continents of Europe and America, and from the

isles of the sea, and subjected to cultivation, side by side, under the daily and close inspection of the appointed officers of the Society. Again, the different sorts of Peas, of which vegetable the fecundity in England seems something astonishing in its Protean shapes, are compelled to submit to a similar crucial test. Of course it is not expected that results thus obtained would be the same under different treatment and in dissimilar soils. But imposture is detected, and the *Purity of Varieties* maintained for the benefit and protection of honest gardeners.

Mr. A. F. Barron, in his Report upon the Red and White Currants, fruited at Chiswick, in the Gardens of the Royal Horticultural Society, A. D. 1875, demonstrates the soundness of the position so early assumed and invariably upheld by your Secretary in his annual reports. "Names," he says, "exist in plentiful variety, but the fruits of all the kinds are very similar, so that it has been impossible to distinguish them. The varieties may vary to some extent, as to the size of the bunches, berries, their color, cropping qualities, &c., but as these are considerably affected by cultivation, situation, &c., their comparative and distinctive merits can only be ascertained when all the varieties are grown together under the same conditions, as in the present instance. The collection, consisting of forty-five (45) reputed distinct varieties, was got together from various quarters, and represents most of the names to be met with in English nurseries, and a few of the French. Altogether there exist about sixty (60) distinct names as applied to the Red Currant and about fifteen to the White, so that the remainder have to be collected and described." Basing the classification chiefly on the "appearance of the plants, their foliage, habit of growth, &c., which is very decided, distinct, and easily to be recognized," he concludes that there "is no means of distinguishing any of the varieties by their fruit alone."

At Chiswick the Gloire des Sablons proved the same as the Gondouin. The Red Cherry turned out to be identical with La Versaillaise, as your Secretary always contended was the fact. But the neatest example of the havoc which continued and exact experiment can make with pomological imposture is submitted, without abridgement, as follows :

"Red Dutch :—(Synonyms—Fertile, Fertile d'Angleterre, Fertile d'Palluau, Fertile de Bertin, La Hâtive, Hâtive de Bertin, Bertin No. 9, Belle de St. Gilles, Chenonceaux, Grosse Rouge de Bologne, Queen Victoria, Red Grape.)"

"This is one of the best varieties in cultivation—a most abundant bearer and ripening early. The bunches are long and the berries large, full and juicy, of a bright red color. The plant is of a dwarf and somewhat slender habit of growth, never attaining a large size. The leaves broad and flat, deep green, having a sort of metallous glaucous hue,

“ which renders it in appearance quite distinct. The synonyms here given are all referable to this one variety, and which is the one generally grown, and known in this country as the Red Dutch.”

How many of our own growers have been robbed of money and time by this disguise of an old favorite variety under a new and sonorous name !

The official position which he now occupies, has been held by your Secretary, with scarcely an intermission, for half a generation. Within that period the Society has undergone many changes. Few remain of the familiar faces that he was accustomed to see at the Annual or Weekly Meetings. Many have fallen like the leaves of Autumn, while others were snatched prematurely away from a happy and useful existence. Some have ceased to feel the interest in Horticulture that they experienced in more youthful days, leaving it to those of us, who regard it as the bounden duty of some one, to bear the burden that has been lifted from their shoulders. And, even to us the task may, at times, appear monotonous. But so is all duty, which, nevertheless, must be discharged. We can only do what lies in our power, feeling assured that no well-meant effort for the benefit of our kind is ever lost, and finding consolation, amid neglect or indifference, in the knowledge that no selfish or corrupt ambition has inspired or directed our labors. What aim those labors should take has been suggested, even to wearisomeness, in these Reports. Their proper direction, as apparent to others, was never more clearly set forth than in the *Gardener's Chronicle*,—so long the mouth-piece and organ of the lamented Lindley :—

“ But apart from mere trade interests, what the Horticulturists want, and what a Horticultural Society should supply them with, is a central association which should promote the introduction and display of new, and of improved varieties of old Plants, whether useful or ornamental, which should carry on independent experimental trials to test the value of new introductions, which should undertake experimental observations in Vegetable Physiology, and other branches of Science of cardinal importance to the interests of Horticulture, but which are of such a nature that no private individual, and especially no one who has his commercial interests to consider, could do for himself. It should keep before the public the dignity of Horticultural pursuits, demonstrate their importance as a branch of experimental science, and bring home to those who only look at matters from a £ s. d. point of view, the immense national and financial importance of Horticultural Science, when properly directed and applied to the relief of man's estate and the enhancement of his nobler faculties.”

Which is all respectfully submitted, by

EDWARD WINSLOW LINCOLN,

Secretary.

HORTICULTURAL HALL, November 1, A. D., 1876.

OFFICERS AND COMMITTEES
OF THE
Worcester County Horticultural Society,
FOR THE YEAR 1877.

PRESIDENT.

WILLIAM T. MERRIFIELD, of Worcester.

VICE PRESIDENTS.

STEPHEN SALISBURY, of Worcester; PHILIP L. MOEN,
of Worcester; O. B. HADWEN, of Worcester.

SECRETARY.

EDWARD WINSLOW LINCOLN, of Worcester.

LIBRARIAN AND TREASURER.

JOHN CALVIN NEWTON, of Worcester.

TRUSTEES (BY ELECTION).
